Learning and Teaching Methods

The first objective concerns the understanding and explanation of the main concepts of management. Accordingly, in the first topic of programmatic content we will discuss the concepts of organization and management, the roles and responsibilities of the manager. At the same time will be announced, broadly speaking, the evolution of management and its major contributions. In order to establish the importance of the concepts and analyzed contributions, will be addressed the current context of organizations, with the most recent clarification of concepts such as internationalization, ethics and social responsibility.

In a second moment, we will enable students to know in depth the process management and its various functional policies. The second topic of syllabus is dedicated to the study of planning and strategy as integrative management area, moving subsequently to understanding the decision-making process and the management functions such as organization, leadership and control. The third and final topic consolidates the study process management with the approach to the strategic role of different functional areas.

Along the sessions students will be encouraged to develop their critical spirit either through analysis and resolution of case studies or by practical examples. This theoretical approach will allow the student to develop practical skills of structuring and rationale.

Assessment Methods

Continuous evaluation methodology:

Presence at least 2/3 of classes to go to continuous assessment;

Test: 60%;

Practical work in Group (With presentation required) - 40%.

This evaluation component (practical work and pitch) can not be made or postponed for the time of examinations.
