

## RESEARCH METHODS AND DATA ANALYSIS II

---

Code: 21732

Main Scientific Area: Business management

Lecturer: Pedro Manuel Ribeiro Novo de Melo

Language of Instruction: Portuguese

Regime: S2

Contact Hours: 30h Total Workload: 132h

ECTS: 6,0

---

### **Objectives**

This curricular unit intends to help the student develop his scientific research project, mainly with data analysis and treatment collected in the research. The goals are:

- Apply the descriptive statistics techniques in the analysis of data set and interpret the findings.
- Apply the statistical Inference techniques as a tool to support decision making and interpret the findings got.
- Identify, plan, and implement the statistical method appropriate to the analytical resolution of a specific problem.
- Analyze and critically interpret the results got.

This curricular unit intends to sensitize students to the importance of correct resolution of real problems in Human Resource Management and Financial Management, providing students with the mastery of main univariate and multivariate techniques used in treatment and analysis of data and inference, using appropriate statistical software.

### **Learning Outcomes**

At the end, students should be able to develop descriptive and inferential analysis of scientific data using parametric and non-parametric methods through the use of statistical analysis software (SPSS and STATA); develop content analysis through interpretative techniques of qualitative data; decide and select the analysis methodologies most appropriate to different practical and research problems and that can execute these methodologies and interpret the information got from the outputs produced by the techniques and software used; and analyze critically means looking at research findings. It is intended those students get solid training in the academic and scientific research field.

### **Course Contents**

1. Introduction to scientific knowledge in Human Resource Management / Financial Management
  - 1.1. Distinction between science and knowledge
  - 1.2. Characteristics of knowledge and scientific method in HRM / Financial Management
  - 1.3. Types of HRM / Financial Management Research

## 2. Treatment and analysis of information in Human Resource Management / Financial Management research

### 2.1. The nature of quantitative research

#### 2.1.1. Preparation and application of surveys

#### 2.1.2. Survey plan

### 2.2. The nature of qualitative research

#### 2.2.1. The importance of descriptive methods

#### 2.2.2. Case-studies

## 3. Treatment of qualitative information in HRM / Financial Management

### 3.1. Principles of content analysis

### 3.2. Types and models

### 3.3. Content analysis steps

### 3.4. Content analysis Softwares

## 4. Treatment of quantitative information in HRM/Financial Management (data analysis using SPSS and STATA)

### 4.1. Statistical analysis (univariate, bivariate and multivariate data)

### 4.2. Hypothesis estimation and testing

### 4.3. Analysis of unifactorial and multifactorial variance

### 4.4. Linear regression and factor analysis

## 5. Presentation of information in research and intervention in Human Resources / Financial Management

### 5.1. Diversity in the presentation of information

### 5.2. Strategies for analyzing and discussing findings

### 5.3. Reporting in HRM/Financial Management

## **Recommended Bibliography**

### **Learning and Teaching Methods**

The curricular unit's syllabus addresses the several dimensions of research methodologies and data analysis, allowing to identify and develop knowledge about data collection methods, qualitative and quantitative data treatment using statistical techniques and software, and discussion of research findings. The syllabus contents are consistent with the curricular unit goals.

### **Assessment Methods**

The curricular unit assessment will be carried out according to the following criteria:

- Conducting an individual research project (80%);
- Project presentation (20%).

The project should focus mainly on the collection, analysis, and treatment of data from a research topic in human resources management/financial management at the students' choice.
