Learning and Teaching Methods

The program contents were defined based on the objectives that are intended to be achieved for this UC, as well as the competences to be acquired by the students. The consistency between these two parameters is then exemplified.

In a first point, the framework of public accounting in Portugal, with emphasis on accounting in the local sector, will be carried out.

In order to understand the accounting system imposed on local authorities, the Accounting Standardization System for Public Administrations (SNC-AP), approved by Decree-Law no. 192/2015 of September 11 and other legislation complementary for students to perceive the system as a whole as an aggregator of economic, budgetary, property and financial information.

After being presented the accounting system as a whole, the two main accounting systems - budgetary and equity – will be studied in order to provide a knowledge of the obligations inherent in budget execution (revenue and expenditure) and execution in equity terms.

It will still be presented and analyzed the forecast documents, within the budget system, of mandatory elaboration in the local authorities. For a deeper understanding of the accounting procedures of budget execution, the following is the accounting procedure underlying the execution of the revenue budget and the expenditure budget.

Finally, the objective of knowing and interpreting the different accounting documents is also provided for in this section of the program, which deals with the underlying accounting procedure (namely the type of documents to be presented and extracted from the different accounting systems), its interpretation and analysis.

The holding of discussion groups and face-to-face seminars will enable this objective to be better achieved.

Assessment Methods

The evaluation of the Curricular Unit will be carried out according to the following criteria:

a) Written work: 60%

b) Oral defense of the evaluation work: 40%
